<https://doi.org/10.1007/s11695-019-03977-3>

Due to human error, the authors neglected to multiply the rate by 100 in order to get the percentage; therefore, the published percentage for penetration rate was out by a factor of 100.

The correct percentage is included in the paragraph below.

This penetration rate of 0.17% is particularly low compared with other published penetration rates, for example, 1.24% in the USA (where the eligible population was defined as adults with BMI \geq 40) [15] and 0.54% in Canada in 2017 (where the eligible population was defined as adults with BMI \geq 35) [16].
